Committed To Excellence

DEPOT MAYFIELD

JANUARY 2021

We were appointed to undertake the large-scale clearance of asbestos containing materials from redundant buildings across a key site in Manchester's urban development plan.

Works included the removal of over 4,000m of Asbestos Cement Roof Sheets from the former Dirt Factory in addition to various items of licensed asbestos materials. Challenges included working to a severely restricted programme whilst maintaining stringent Covid-19 precautions, working at height within the midst of Storm Christoph and managing a condensed pattern of hazardous waste disposal within a tight site boundary.

All works were safely completed within the required 11 day programme.

VALUE: £80,000

PROGRAMME: 11 DAYS
